

JONATHAN REUS

The future can only be anticipated in the form of absolute danger. It is that which breaks absolutely with constituted normality and can only be proclaimed, presented, as a sort of monstrosity

I am an American born artist with Dutch, Indonesian and Eastern European roots. My work uses performance and music to explore questions of how culture is represented in technological forms. Methodologically, I take on long-term research trajectories that unfold through iterations of a single work and require the establishment of new artistic vocabularies developed through intimate relationships with technical materials, tinkering, experimenting, exploring the possibilities of self-made artistic software and hardware.

Dadasets is an ongoing interdisciplinary music project, and a response to the cultural and economic ecosystem of voice AI and voice data that is

	voice dataset making as a laborious, improvisational and absurdly banal performance form. festival-izis.org/en/just-control/ Solo		rapidly terraforming the meaning, value and function of voice. This work is supported by S+T+ARTS AIR, an artist residency program of the European Commission. Read more on the website.
2024	i: goʊ weɪ IRCAM Forum 30th Anniversary Paris, Frankrijk Solo performance of i: goʊ weɪ - i: goʊ weɪ is my ongoing practice of hybrid voice work, since about 2021, where I try to use my voice, transformed through real-time "AI" systems, as a way of inhabiting different kinds of bodies, emotions, expressions – and navigating the fragile but powerful connections between voice and sense of being a single, but connected, body. jonathanreus.com/portfolio/igouwei/ Solo	2024	METAORGANISM Performing Arts Lab University of Twente Twente, Nederland www.utwente.nl/en/designlab/events/2023/12/1267634/salon For this special evening, the main space of the DesignLab, University of Twente, was transformed into a performance art laboratory, presenting a collage of vignettes exploring the use of interactive technology, AI voice and wearable robotics in live performance. The performances presented were developed through an intensive 3-day pressure cooker at the DesignLab, where a group of invited artists and technologies have collaborated to create new work on the spot, using a combination of rapid prototyping and rapid ideation, creation, and experimentation.
2020	Words and Music Muziekgebouw aan 't IJ Amsterdam, Nederland Premier of new work "Wordless", that attempts to recreate an imaginary conversation between Samuel Beckett and Morton Feldman at the end of history. www.muziekgebouw.nl/agenda/themas/206/Words_Music_2020/ Groep		
2020	In Kepler's Gardens Ars Electronica Centre Linz, Oostenrijk Exhibition of The Intimate Earthquake Archive ars.electronica.art/keplersgardens/en/ Groep	2023	In Search of Good Ancestors / Ahnen in Arbeit Deutschlandfunk Kultur Berlin / Deutschlandfunk Kultur, Duitsland ahnenn.in A year-long experiment in generative radio, investigating the nature of datasets and machine learning algorithms as unstable, intergenerational memory. A 24-hour broadcast on German Public Radio features the voice(s) of an artificial BroadCaster, a bespoke generative voice instrument utilizing deep learning text and speech models that begin pre-trained on widely used public research datasets. The BroadCaster mutates via trainings on small-scale datasets created collaboratively through a series of public workshops happening through the year. The Broadcast + Workshops navigates themes of long-term and intergenerational thinking – using as its seminal text American virologist Jonas Salk's 1977 lecture "Are we being good ancestors?". Here, Salk, a renowned altruist, calls for the cultures of "the West" to make intergenerational responsibility the highest moral imperative. Through the year the BroadCaster repeatedly attempts to extrapolate on this lecture, its predictions altered by the contributions of texts, stylistic annotations and voice recordings collected in the workshops. Thus, new vocal identities and poetic styles emerge in excess of the single voice, while those of the initial trainings decay over time through a process of "catastrophic forgetting" when being trained on a dataset whose diversity unfolds over time. The broadcast streams from January 2022 – February 2023 at ahnen.in, while fragments are played intermittently on German Public Radio until end of December 2022. The workshops' activities were conceived in collaboration with artist-researcher Eleni Ikonidou, and Angeliki Diakrousi, Joana Chicau, amy pickles and Cristina Cochior of VARIA. This work is commissioned by CTM Festival,
2018	Brace for Impact Stedelijk Museum Amsterdam, Nederland If this; then that. A 2 hour performance commissioned by De Appel for the atrium of the Stedelijk Museum. www.e-flux.com/announcements/181567/brace-for-impact/ Groep

2014	The Future: failure/no failure, a dedication to Erkki Kurenniemi International Film Festival Rotterdam Rotterdam, Nederland An evening concert dedicated to the work of flamboyant Finnish futurist, inventor, experimental filmmaker and electronic music pioneer Erkki Kurenniemi. Performing on the exposed circuitry of obsolete waste computers, Jonathan Reus provides a brute alternative to computer music. Reus' torrents of glitched visuals, hard digital rhythms, and body-interfacing performances make a modern dystopian counterpart to Kurenniemi's optimistic vision of the human-machine condition. iffr.com/en/blog/mind-the-gap-nights-2014 Solo	2022 Anatomies of Intelligence V2 Rotterdam Rotterdam, Nederland anatomiesofintelligence.github.io/ Anatomies of Intelligence is an artistic research initiative seeking to make connections between the formats and collections of anatomical knowledge and investigations into the “anatomy” of computational learning and prediction processes, datasets and machine learning models.
		2022 Sensory Cartographies Platform for Thought In Motion The Hague, Nederland sensorycartographies.info/ Sensory Cartographies is a collaboration between composer Jonathan Reus and artist- researcher Sissel Marie Tonn. The Sensory Cartographer seeks to explore extreme and information-rich environments; developing an understanding of these spaces through mediated forms of attention and mindfulness towards physiological, psychological and cognitive movements. We create wearable technologies and neuro- sensory attunement instruments that attempt to renegotiate techniques of cartography, collection, categorization and navigation originating the in colonial “golden age” of botany, drawing a line between these impulses to categorise nature to modern measurement and monitoring technologies.
		2021 Celestial Fruit on Earthly Ground Forecast Platform, Berlin Online, Ghana cfoeg.land A hybrid digital/performance project exploring the cultural and geographical pathways of musical knowledge. Beginning with the American banjo family, and the oldest existing banjo of the Americas, the Surinamese “creole bania.” This becomes a starting point for seeking out a living network of musicians, instrument-makers, and tradition-bearers. The project has two parts, 1) live performance collaborations on-site, and 2) an interactive software experience, gathering traces of these exchanges as music, text, and objects in the physical world digitized remotely. The experience will express a layered and flexible concept of heritage that validates the role of online encounters, while also recognizing their fragmentation and acknowledging the need for interpersonal exchange in building respect for the cultural histories we are entangled in, both by circumstance and by choice.
		2018 The Reading Room Stroom Den Haag The Hague, Nederland platformtm.tumblr.com/ The Reading Room is an event series dedicated to creating a community- oriented, public platform for encounters with contemporary ideas on art and society.

At its core, the Reading Room series revolves around the reading of texts provided by invited guests – cultural theorists, philosophers and curators – who join our diverse community in an open discussion while providing insight, context and perspective on the topics at hand. The series stems from a belief that keeping a close connection to historical and emerging theories on art and culture is invaluable to artists. Especially in the 21st century, where theory, practice and social engagement in the arts seem to merge ever more seamlessly. The Reading Room’s curatorial and organizational team is Sissel Marie Tonn, Jonathan Reus and Flora Reznik. The program is produced by the Instrument Inventors Initiative and, since 2016, is hosted by Stroom Den Haag.

2014 Ogen/blik Het Nutshuis, Den Haag The Hague, Nederland Performance series / artist initiative showcasing surprising and unusual performance experiences for an audience.

INTERNATIONALE UITWISSELINGEN / ARTIST-IN-RESIDENCIES

2024 S+T+ARTS Den Haag/ Koper, Nederland ~~Dagelijkse~~ is an ongoing interdisciplinary music project, and a response to the cultural and economic ecosystem of voice AI and voice data that is rapidly terraforming the meaning, value and function of voice. This work is supported by S+T+ARTS AIR, an artist residency program of the European Comission that supports interdisciplinary work at the intersection of art, science and technology with a focus on holistic and human-centered ways of thinking. Is it supported primarily through the core AIR hub PINA, in Koper, and by composer Mauricio Valdes, who runs PINA’s art+science lab, and spatial sound studio HEKA. starts.eu/what-we-do/residences/air/

2023 University of Twente Twente, Nederland Jonathan Reus was the UT artist-in-residence for 2023, where he worked on exploring how AI voice and wearable robotics could be used in performance. Reus’ work always involves a collaborative element, and at the UT he worked together with the DesignLab, as well as students and faculty from Creative Technology. www.utwente.nl/en/sports-and-culture/offer/events/2024/4/1430009/expositie-artist-in-residence

OPDRACHTEN

2022 In Search of Good Ancestors / Ahnen in Arbeit CTM Festival, Berlin Online, Duitsland A year-long experiment in generative radio commissioned by CTM Festival and Deutschlandfunk Kultur. An artificial BroadCaster, a bespoke voice synthesis system utilizing current deep learning techniques in voice synthesis and style transfer shifts through speech and song, words and soundscapes, reading through text as if tracing slowly over the letters, probing them and unsettling them. The *BroadCaster* performs words produced by a predictive process. Beginning with Jonas Salk’s essay “Are we being Good Ancestors?”, it tries to predict what words should come next based on its previous memories. Ideas of long-term thinking, wrapped up in human activities of prediction, risk analysis, and memory happen at many levels of human society and individual consciousness. How do we make decisions today, navigating the many layers of uncertainty about the long-term future we are a small part of? [www.ctm-festival-2022/programme/features/radio-lab/in-search-of-good-ancestors-ahnen-in-arbeit](https://www.ctm-festival.de/festival-2022/programme/features/radio-lab/in-search-of-good-ancestors-ahnen-in-arbeit) Uitgevoerd

2021 hackingrhythm.online Slagwerk Den Haag Online, Nederland Hacking With Rhythm is a sonic research project into how sound and internet infrastructures intertwine to create music. The project’s aim is to collect interventions by inquisitive composers and sound artists who challenge the concepts of what is an instrument and what is a stage.
